

Construction of medium voltage conductors

In 2012 our company made a construction project of medium voltage conductors of 6-10-35 kV more than 1200 m. in length in Saint Petersburg

Amount of work consisted of designing, equipment delivery, trestle construction, equipment installation and equipment commissioning

Voltage conductors produced by "GK "Electroshield" – TM Samara", trestles and crossings are own-produced

During the project execution documentation of European projector was fully changed, foreign equipment was replaced by domestically produced equipment and detailed design documentation was developed in accordance with statutory regulations of Russian Federation.

Construction was carried out in urban area.
During construction works three missiles of the Second
World War period were found.
